

DEVOPS FOR AUDITOR OVERVIEW

DevOps represents a major paradigm shift in how enterprises author software. By integrating the operations side of software deployment into development itself, enterprises can create applications more efficiently, adapt more quickly to changes in user requirements and achieve greater resilience in operations so that applications perform more smoothly over time.

In this 2 days of **DevOps for Auditor class**, you will learn :

Understanding Agile, DevOps and ITSM

In the first day, we will start with the interactive discussion and solid understanding of Agile and DevOps, followed by how Enterprises integrate them with current IT service management process. Some case studies from financial industry will be used to enrich the discussion

Reviewing DevOps Control

We will deep dive into DevOps control review to ensure proper controls are implemented, and how to implement it while still maintaining speed of delivery that required in digital world.
